

The Vibration Solution

Press Release

Innovative Silent Feet® quiet noisy appliances.

The Vibration Solution introduces **Silent Feet®**, the most effective vibration absorbing appliance pads available. These newly engineered pads feature energy absorbing **Sorbothane®**, a visco-elastic polymer. **Silent Feet®** have been designed to significantly reduce or eliminate noisy and harmful vibrations on virtually every washing machine and dryer on the market today.

Silent Feet® are easy to install with each set featuring two "easy-slide" rear pads and two "super-sticky" front pads. Simply pull the appliance out and place the two "easy-slide" **Silent Feet®** pads under the appliance's rear feet and slide it back in place. Then lift the front of the appliance and place the two "super-sticky" pads under the front feet and installation is complete.

Sorbothane®, a one-of-a-kind proprietary material, is specified by engineers worldwide for its vibration isolating properties and has achieved shock absorption levels of up to 94.7%. **Silent Feet®** appliance pads, featuring **Sorbothane®**, significantly reduce vibration and do it better than any other product. Less vibration means less noise and less chance of structural damage. Unprecedented absorption levels are possible because **Sorbothane®** attenuates shock waves by dispersing energy outward from the impact source. Durable and long lasting, **Silent Feet®** vibration damping appliance feet, will not "bottom out" as do most common rubber materials on the market. **Silent Feet®** appliance pads provide continuous effective performance and carry a lifetime warranty.
